

ELECTRONIC SYSTEMS

FEATURE ANALYST™ PRO

SOPHISTICATED FEATURE EXTRACTION

Feature Analyst Pro software is an automated feature extraction tool for GIS analysts. Rapidly and accurately collect vector feature data from high-resolution satellite and aerial imagery. Capture hydrologic zones, buildings, roads, vegetation and other land-use to gain spatial understanding.

TEXTRON Systems

FEATURE ANALYST™ PRO

REDEFINE EXTRACTION

Feature Analyst Pro offers a simple interface, end-to-end workflow and model-based approach for extracting a wide range of geospatial features. The customizable extraction process allows for the best results by letting the user adjust the settings for the specific feature types.

INTEGRATION

Feature Analyst Pro integrates with Esri®ArcGIS® Pro making installation and training as simple as possible. In addition, Feature Analyst Pro can be used in conjunction with Textron Systems' LIDAR Analyst™ Pro.

AUTOMATION

Boost efficiency across all phases of images feature collection using automation. Trainable algorithms identify and extract features of interest. Analyst can set templates based on pixel patterns associated with desired features to examine the context of the target pixels teaching the software what to look for in the surrounding pixels.

ACCURACY

Analyst can increase accuracy and further reinforce the extraction model by selecting correct and incorrect examples of extracted features from the initial returned set. Feature Analyst Pro executes the same model against all applicable imagery, delivering improved accuracy and results.
