

BATTLEHAWK™

SQUAD-LEVEL LOITERING MUNITION

TEXTRON SYSTEMS' PRECISE, LETHAL LOITERING MUNITION

The BattleHawk Squad-Level Loitering Munition is a lightweight, man-portable system that allows dismounted troops to locate, validate and interdict soft targets including enemy personnel and light vehicles. A backpack-carried system, the BattleHawk can be deployed quickly via tube launch, providing critical protection and prosecution capability against both line-of-sight and non-line-of-sight (NLOS) threats.

POWERFUL CAPABILITIES AND PRECISION EFFECTS

Textron Systems' BattleHawk Squad-Level Loitering Munition gives the warfighter an organic, lethal-strike capability in a man-portable configuration suitable for mountain, desert or urban combat operations. It delivers a unique blend of long stand-off, advanced intelligence, surveillance and reconnaissance (ISR), and precision effects to empower the dismounted soldier with critical protection and interdiction capabilities. The system contains a 40-millimeter warhead designed with a dual-mode fuze, enabling either height-of-burst or point detonation.

BattleHawk provides demonstrated lethal effects against soft targets, including light vehicles and personnel. The system supports numerous applications including:

- Squad-level protection and interdiction against sniper or mortar threats in defilade
- Protection against NLOS threats during raids
- Patrol support to locate, validate and destroy threats, such as insurgents emplacing improvised explosive devices or setting up ambush along supply routes

Utilizing both visible and infrared imagers, BattleHawk supports day and night operations. The ruggedized system controller is configured for operator ease of use and features intuitive targeting and engagement mechanics. Together, these features provide the warfighter with reliable, NLOS force protection capability.

FEATURES

- Long stand-off or quick strike capable
- High resolution day/night imagers
- Single user operation
- Easy-to-use operator interface
- Lightweight, man-portable
- Short set-up time
- Wave-off capability
- Moving target capability
- NLOS capability
- Low collateral damage

SPECIFICATIONS

Weight:	Less than 5.5 pounds with launcher
Length:	Air vehicle 18 inches (in.); in launcher 22 in.
Speed:	100 knots prosecution
Endurance:	More than 30 minutes
Range:	More than 5 kilometers
Operating altitude:	500 feet above ground level
Launch altitude:	Up to 10,000 feet above sea level
